"InterMune Eraser 8 is not really what most people may expect from an anti-virus software. It isn't very groundbreaking and doesn't have many new functions for it to stand out. However, it is a really

simple tool that automatically scans the files on your computer and removes the virus. If you are looking for something that is not too complicated, this may be the software for you.

"Democrats on Thursday showed off a new ad in Kansas promoting Barack Obama's personal story and bringing to life one of the Democratic

campaign's most effective attack lines against the GOP: Mitt Romney is a rich guy from the wealthy background who has said he's actually running for president "because I'm a job creator." The 30-second spot, set to air across Kansas over the next few weeks, features a new mom and college student who tells the viewer: "I'm Mitt Romney."

I'm a Mormon from Michigan. I'm running for president because my family didn't have money." "It's not what you think," she adds, as the audience bursts into laughter. "It's not because I'm rich." The spot is part of a new campaign by Democrats, who face a choice in next week's Kansas caucuses. They've opted to focus on the

economic issues, with the theme that the Republican party has been standing by while fellow party members languish in the unemployment line. Speaking to reporters in Washington on Wednesday, Democratic Senatorial Campaign Committee Executive Director Guy Cecil described the ad as "an

ad that was designed to illustrate the contrast between Governor Romney and every single American." "It's an ad that will show us what Mitt Romney believes in and how he wants to help America," Cecil said. Cecil argued that "our

east-tec Eraser, you will feel more organized! .In mammals, one of the earliest differences between males and females is the formation of the Y-chromosome. The Y-chromosome is uniquely capable of degenerating to form a class of selfish genetic elements. This process, known as Y chromosome evolution, plays a major role in the

speciation of several groups of organisms. The Y chromosome has received significant attention because of its role in male infertility. Recently, studies have begun to investigate its role in autoimmunity, and the unique features of the Y chromosome in comparative genomics have led to the identification of many

genes of interest for autoimmune and rheumatic diseases. The young Y chromosome is particularly interesting because it is thought to contain highly repetitive sequences and a large amount of repeat-derived mutation. A speciation model using the young Y chromosome that has already undergone mutation might be most

amenable for studying the role of autosomal mutations in systemic autoimmunity. The long-term goal of our proposal is to study mechanisms that lead to the formation of novel autoantigenic peptides on the young Y chromosome. In this
