OkRead more Hydrangea flavicans 'Golden Dream' is just one of many lovely hybrids and species of sunflowers blooming in our gardens this Spring. It is a full blooming hybrid that is enjoyed for both the attractive seed head and the heavily scented, sweet-smelling blooms. Another popular variety is Hydrangea macrophylla 'Decoction Pink'. This one is a large, clump forming upright flowering plant with large size flowers. You will likely be able to plant both of these gorgeous sunflowers all over your yard this Spring. Easy to grow and care for, these Sunflowers will be sure to dazzle you and your guests all season. Also suitable for the rock garden are the double flowers of Hydrangea paniculata. The black margins on the petals of this plant are a reminder of its deciduous nature. In the Fall, the dark, terminal spikes of the flower will die down to reveal the large, nodding-shaped, pink flowers that emerge in Spring. Hydrangea serrata is a good choice for your shrub border as it grows to a mature height of 6-8 feet with a spreading growth habit. It is a deciduous hybrid that blooms early in the Spring and continues throughout the year. The seed heads of this variety are attractive and can be used as a cut flower for bouquets. One of the most effective and durable methods for getting rid of dandel

What's New In WixEdit?

Windows Installer installer maker, no editor is the final version. This site not only let me build MSI packages for my Inno Setup projects, but also give a GUI to create the source files for the custom actions I use in my Setup projects. Features: Advanced Custom Action that writes and read string-variables from a specific path of the executable file (called "INTERNALDIR") Image Custom Action that write the image file of the Executable file to a specific path of the executable file (called "INTERNALDIR") Patch Custom Action that let the user mark/unmark a series of files as a patch (file exists) and updates the INTERNALDIR files on the executing program. Custom Action Example Videos Here's a video (40 minutes) that shows you the capabilities of the product. The first installer created in this series of blog posts. This particular one is the first application written to use a few new features found in WixEdit 4.0.x. This installer is not meant to be the coolest installer I've ever seen. Instead, it's meant to serve as a learning guide. What's New? Some of the changes between WixEdit 3.0.x and WixEdit 4.0.x are: Syntax. The.wxs project files have been reworked to use a different, more maintainable, syntax. Thus, they can be opened and edited directly, as opposed to the original.wixproj files. Prerequisites. The prerequisites were divided into two categories: File-system and Registry. File-system prerequisites contain references to folders that are created for the prerequisites to be installed to. File-system prerequisites also contain references to other files that must be installed. Registry prerequisites contain references to registry entries that are used for any of the following: Setting auto-start application Checking if the application should be launched by Windows Setting auto-run events What's new in version 4.0.x? There are a couple more features I've added to the new version: Set the application name to a key string. Many users have contacted me, asking me how they can get the application's name from the installer

Write a text file that contains the application description. It is important, and is advised by the Application Tab of the Setup project in Visual Studio, that you write a description of the
