I am experiencing serious problems with Windows, this is not my first time on the forums, it is however my first time using a Windows 7 computer. I have had a OS running on a netbook for about 1 year now without any issues, and I also built my own PC. While trying to dual boot my normal setup with Windows 7, I ran into a problem very similar to this (wallpapers didn't appear to change or load correctly, and then after reboot I ended up with my desktop acting like MSN classic, it would only load websites for MSN in the middle and try to zoom in, which was REALLY annoying) and I fixed it by adjusting the themes, but in Windows 7 my installed themes don't work and only one works, and the OS doesn't know what theme is installed. My normal themes load fine, and I've verified that the folder has the right files in it. Does this mean I should just get a theme designed by a professional, and not a theme designed by a random person on the internet? Anyway I can fix this? 5ec8ef588b
